

MINH SANG DANG

JAVA WEB DEVELOPER

CAREER GOALS

Within 1 year, you will develop your skills and quickly join the excellent staff of the company. Always upholding the spirit of learning new languages and technologies, improving foreign languages and perfecting skills so that within the next 2-3 years will become a diverse programmer. Learning how to plan, time management, people, problem solving and what makes a good leader is my goal for the next 4-5 years.

- customer by filter condition
- Pagination

General introduction about the project: SAPO CUSTOMER MANAGEMENT

Sapo is an integrated Multi-Channel Sales and Management Platform agreed, so we chose Sapo to find out Professionalism and rework, This is a big project with the cooperation of many groups of students and went through many stages of development, so Our team apologizes not to go into parts of the

previous group. In the process of researching, the team SKT realized today there are still many stores that use manual method of bookkeeping while just a few operations can also create and store information about customer. And keep it for a long time instead of having to keep the books complicated. Thanks to smart search engine and filter by multiple status, the shop owner can analyze and form a list of customers loyal customers to set out customer care strategies reasonable, so our team has researched and developed the management part customer management
